19. **STANDARD PENETROMETER APPARATUS**

As per IP 49, 50 & 167 IS 1448
This apparatus is used for penetration test on
a wide variety of materials such as grease,
petroleum, bitumen, tar, wax, polish, food stuff,
rubber asphalt and pharmaceutical and cosmetic
creams. A given force is applied over a given
period of time and the depression thus made
in the sample is measured in tenths of a
millimeter and expressed as penetration.
It consists of a head support mounted on a
vertical rod which can be a adjusted for
height. A reck and pinion and pointer assembly
provides fine adjustment of needle tip to sample
and incorporate a slipping clutch and subsequent
resetting a sample and accurate operation.
